This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

- First compound selected from a group consisting of lysine, an amino acid, or other proteinaceous moiety having a free amino group with a pKa substantially similar or equal to that of lysine or pharmaceutically acceptable salts or carboxyl derivatives thereof.
- Second compound which is a positively charged compound, or pharmaceutically acceptable salts or carboxyl derivatives thereof

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Art Unit: 1617

The claims are deemed to correspond to the species listed above in the following manner:

- First compound correspond to claims 21, 24-29, 34, 37, 40-45, 50.
- Second compound correspond to claims 21-23, 30-33, 35-39, 46-52.

The following claim(s) are generic: 21, 37.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

- With respect to the instant first compound, any amino acid may be employed in place of lysine or lysine like proteinaceous moieties. Amino acid, such as tyrosine or tryptophan, their carboxyl derivatives or pharmaceutically acceptable salts thereof, do not share the same technical feature as lysine, because they are chemically and structurally different. Accordingly, they do not correspond to the same technical feature within the meaning of PCT Rule 13.2
- With respect to the second compound, a positive compound encompass various ionic moieties that are structurally, chemically and physically different. Such agents encompass a chelator or an organic acidic such as acetic acid. Thus, they do not correspond to the same technical feature within the meaning of PCT Rule 13.2

A telephone call was made to Barbara Johnson on September 30, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 1617

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
